

iDMe Touch-free contact register

New Zealand sports organisers are required to maintain a contact tracing log to identify individuals who may have come into contact with someone diagnosed with COVID-19

iDMe delivers this free for community sport

Step 1 - Sports Organisers

iDMe lets sports organisers turn your own smartphone or tablet into a QR Code scanner so you can instantly scan people into your venue, courts, turf, fields or clubrooms.

Or display a 5 letter venue code so people can self check-in to register their attendance at training or your venue without needing to be scanned by you.

Step 2 - The Community

iDMe lets people create their own personal QR Code on their phone with their contact information (name, address, email, phone number). They can save it to their phone home screen so it's instantly available, even offline.

Multiple personal QR Codes can be saved to a single phone, making it easy to display and provide everyone's contact details, completely touch-free.

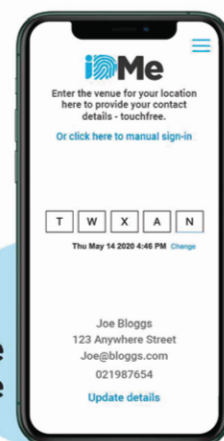

Or simply enter the 5 letter venue code to check-in at any iDMe location without needing to scan.

Data - Stored Securely

The contact details of each person who scans in or performs a self check-in are automatically added to a secure database that is accessible to each sport organiser. Each record includes the location, date and time of attendance.

Records are automatically deleted after two months in accordance with Ministry of Health Guidelines.
